

Innovative Projects

Kennedy Van der Laan

Innovative Projects

Our goal is to be as creative and visionary as our clients in the application of legal solutions to cutting edge projects, whether it is a new invention, business process or a way of doing business. As a result we have a reputation of being the “go to” group for cutting edge technology projects. Our recent projects include a nation-wide public transportation chip card project, an iris-scan system for screening of airline passengers, a global banking project using digital signature technology to identify parties to B2B transactions, and one of the world’s most advanced IT-driven deep-sea container terminals.

Track Record Innovative Projects

For an international bank

- A global online B2B project in which digital signature technology along with network of banks are used to both assure identification of parties in B2B transactions and to secure payment

For an international airport

- Introduction of iris-scan technology for identifying passengers
- “Virtual airport city” project including on-line duty-free purchases

For a consortium of Dutch banks

- Use a chip (debit) card not only as a means of payment but also as a means of age identification for purchase of cigarettes from machines

For a Dutch Ministry

- For a pilot high technology community, privacy and public procurement law advice, contractual relationships, public-private cooperation

For a consortium of pharmacies

- Establish a foundation to promote the use of ICT solutions in the Pharmaceutical Industry
- Advise on the legal aspects of exchanging patient and medication information among participating pharmacies and medical providers

For a consortium of Dutch transportation providers

- National Public Transportation Chip Card project: use of a chip card for payment for all public transportation in The Netherlands, personal data privacy aspects of the project, clearing and settlement of payment accounts

Dutch railway company

- Virtual private network for matching train information in Europe

International mobile telephone services provider

- Location-based services, both active and passive
