

Technology

Kennedy Van der Laan

Technology

Kennedy Van der Laan has been focused since the early 1990's on technology law and business. It has been our goal to have a deep understanding of technology developments, technology markets, the legal issues that are associated with fast-moving technology changes, and the legal challenges in the business context confronting both providers of technology and business users of technology.

Our technology experience is broad, including IT, Internet and ecommerce, biotechnology, telecommunications, media, energy, and outsourcing.

Track Record Technology

For an international bank

- Legal structuring and support of a global online B2B project in which digital signature technology along with network of banks are used to both assure identification of parties in B2B transactions and to secure payment

For an international airport

- All legal support for introduction of iris-scan technology for identifying passengers

For a consortium of Dutch banks

- Legal structuring and support for a project to use a chip (debit) card not only as a means of payment but also as a means of age identification for purchase of cigarettes from machines

For a consortium of Dutch transportation providers

- All legal structuring and support for the national Public Transportation Chip Card project to introduce use of a chip card for payment for all public transportation in The Netherlands
